

JERSEY CITY REMOTE-LEARNING ONLINE RESOURCES

Access Online Resources [HERE](#)

Modules Overview:

Service Learning

Students use a problem-solving process to identify local issues, determine the stakeholders, and develop solutions using critical-thinking, problem-solving, collaboration, and communication

Energy Conservation

Students learn about how electricity is produced and complete a home energy audit to better understand their personal energy consumption and being smart with our energy use

Renewable Energy

Students learn about different types of renewable energy, how to transition to renewable energies to generate electricity in a more sustainable way, and identify the challenges posed by nuclear energy

Sustainability & Food Systems

Students explore the three pillars of sustainability and learn about more sustainable food systems and food security

Climate Science

Students learn about the climate science, climate risks, and analyze different strategies designed to address the effects of climate change
